Experience

Founding Engineer

August 2026 – Present

99 Point

San Francisco, CA

- Built the document search under 99 Point's fund-accounting agents: BM25 over lexeme-normalized chunks, each excerpt hash-pinned to its source. Frozen-benchmark recall at 20: 23.5% to 93.3% on concept queries, 3.8% to 92.2% on descriptions.
- Shipped the agent construction chain behind flags, with byte-identical end-to-end goldens against the real compiler.

AI Innovation Intern

June 2026 – August 2026

Crescendo AI

San Francisco, CA

- Sole engineer on the internal AI platform. Shipped five apps to Cloud Run with Cloud SQL in six weeks.
- Built the triage router: a rules pre-filter, then an LLM judge, then a frontier model only for drafts, behind a grounding gate that blocks any output that cannot quote its evidence. Open-source judges cut cost per query by 40% at equal quality; across 890 tasks and 10 models the cheap tier beat the frontier tier, 0.702 to 0.637 judge-rated quality, at one-fifteenth the cost.
- Architected the sales data lake and migrated 5M records into it in a day; Gong, Salesforce, and HubSpot now feed it daily.
- Closed a \$50k/year customer, outside the role: 20 minutes with their founder, then on site to deploy. Live in a week.

Software Engineer

July 2025 – Present

Ovavision Fertility

New York City, NY (Remote)

- Rebuilt the consumer app in React and Next.js; moved model serving to async FastAPI, Celery, and Redis: p95 850ms to 210ms.
- Replaced the mocked model path with a two-stage ONNX pipeline on a GPU host, with idempotency guards on every retry.
- Built the Stripe payment layer behind 100 backend tests: PaymentIntents, webhooks, coupons, regional pricing, rollover.

Data Engineering Intern

June 2025 – September 2025

Rigetti Computing

Fremont, CA

- Built the fab monitoring dashboard on Palantir Foundry over sensor, cryostat, and process-control streams: 15+ KPIs, used daily.
- Built anomaly detection over 60M+ daily sensor records. Partitioning and indexing cut dashboard query time from 2.1s to 0.74s.

Software Engineer Intern

Jan 2025 – May 2025

European Bank for Reconstruction and Development (EBRD)

London, United Kingdom (Remote)

- Built natural-language tooling and data workflows that helped analysts search and triage material in a large document stream.

Projects

DavisDine

April 2026

iOS in SwiftUI, FastAPI and Firestore on Google App Engine

Live on the App Store

- Built and shipped alone, zero to App Store in a week: allergen filtering and a macro planner over the dining halls.
- Reached 100 daily active users by installing the app for students outside the dining commons and collecting feedback.

Engram

May 2026

Agent memory: SQLite FTS5, BGE embeddings, cross-encoder rerank

Serving four coding agents

- Beat LoCoMo Recall@10 baselines, 0.891 and 0.726 against 0.847 and 0.662; reranking added 14.9 points.

Research

Undergraduate Researcher, Complex Care Laboratory

May 2025 – Present

UC Davis Health — Advisor: Dr. David A. Liem

Sacramento, CA

- Fine-tuned a PubMedBERT ensemble to classify protein-HFpEF mentions in PubMed: 85.3% accuracy on 300 held-out sentences.

Education

University of California, Davis

Davis, CA

Bachelor of Science in Computer Science & Engineering · Tau Beta Pi · High Honors

June 2026

- Vice President, Swift Coding Club (Sep 2025 – June 2026): membership and engagement reached the club's peak.
- Head of Tech, Machine Learning Student Network (Sep 2025 – June 2026): led workshops and taught members machine learning.
- Course Tutor, UC Davis Computer Science Tutoring (Winter 2025): operating systems and algorithm design, unpaid.

De Anza College and Foothill College

Cupertino and Los Altos Hills, CA

Associate in Science for Transfer: Computer Science and Mathematics, Magna Cum Laude; Physics

2022 – 2024

- Paid my way by tutoring: Think Academy in San Jose (2024), Roblox in Lua at theCoderSchool, Scratch for kids in Saratoga.
- Help students from the Kyrgyz community with college admissions and with transferring to the University of California.
